DETAILED ACTION

Priority

1. Acknowledgement is made of applicant's claim of priority under 35 U.S.C. 119 a-d based upon an application filed in PCT EP99/02242 on 4/1/99 and DE 19814982.5 filed 4/2/99. A claim for priority under 35 U.S.C. 119 a-d cannot be based on said applications, since the United States application was filed more than twelve months after.

Oath/Declaration

2. The oath claims foreign priority to DE 19814982.5 filed 4/2/98. It is unclear as to whether year is 1999 or 1998. Clarification and/or correction is required.

3. The request to change corrected filing receipt filed 2/12/02 has not been entered. The office's computer will not allow such a priority beyond the twelve month period. Moreover, the response filed 2/12/02 on page 9 states that DE 198 14 68.2 was filed April 1, 1988. It is unclear as to which date is being claimed. In either instance, priority cannot be granted under 35 U.S.C. 119. Clarification and/or correction is required.

**THE FOLLOWING IS A NEW GROUND OF REJECTION NECESSITATED BY THE
AMENDMENT**

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 17 is rejected under 35 U.S.C. 102(b) as being anticipated by Shigehiro (EP 0798 388 A1 January 10, 1997).

Shigehiro teaches a method of detecting the amplification of gene by using latex bound antibody to measuring particle agglutination via light scattering (see whole document esp. page 6 & 7).

Applicant has amended claims to recite “free of fluorescent additives”. Shigehiro uses the latex particles for detecting the scattering (see also claim 4).

SUMMARY

5. No claim allowed. Fujiwake (US 5,756,297 May 26, 1998) and Takama et al JP 10117797 A May 12 1998) with English abstract are enclosed as reference of interest. Fujiwake teaches isopropanol preparation to render nucleic acid insoluble for detection by scattering light.

Art Unit: 1656

Takama et al teach use of colloid for gene detection in Raman scattering light. Neither however, teach or suggest the measurement in real time amplification of DNA or RNA.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
